## **VIRTUAL HEROES NAMED TO MILITARY TRAINING TECHNOLOGY MAGAZINE'S TOP 100 FOR SECOND CONSECUTIVE YEAR**

**Cary, NC (December 4, 2006)** – Virtual Heroes Inc. (VHI), the Advanced Learning Technology Company, today announced that it was named a 2006 Military Training Technology (MT2) Top 100 company for the second consecutive year. The MT2 Top 100, from Kerrigan Media International and Military Training Technology, is a listing of companies that have made a significant impact in the military training industry this fiscal year—whether in live, virtual or constructive simulation, training or education.

Military Training Technology's editorial board and a panel of independent experts chose the top 100 companies from more than 600 candidates based on various criteria, which, in part, included total military sales, end-user feedback, innovations and need for the solution.

VHI creates advanced learning technology solutions for the federal systems, healthcare and corporate workforce training markets, leveraging sophisticated electronic computer games and graphics technology to address training and simulation needs. The company was chosen for the MT2 Top 100 for its significant achievement and competency in the areas of instructional design, digital engineering, project management, modeling and simulation, courseware development and assessment in providing unprecedented immersive training experiences. VHI is also reaching new heights with the current development of a HumanSim™ dual-use medical training product platform for military personnel and civilian first responders.

"It is an honor to make the Military Training Technology Top 100 for the second year in a row," said Jerry Heneghan, Virtual Heroes' founder and CEO. "This is a great way to top off an exciting and productive year for Virtual Heroes."

VHI was recognized by MT2 in 2005 for leading the industry in innovation through the creation of America's Army game content and technology, the America's Army Convoy Skills Engagement Trainer, TRADOC Future Solider Training System, and Special Forces Adaptive Thinking and Leadership application.
